Computer Engineer who enjoys creating value with software. I do not have any preference between languages, components (backend/frontend) or technologies. I enjoy solving problems no matter where they are. I am open to learning new technologies as long as I can bring value to the project and develop my skills in the meantime. My experience mainly consists of but not limited to creating backends using Kotlin (Spring Boot), Python (Flask) and creating frontends using Javascript/Typescript (React). Seeking opportunities to use/improve my skills in backend development and software architecture.

WORK EXPERIENCE

VALENSAS

Software Engineer

Sept 2020 — Present

Istanbul, Turkey

- Working for a nation-wide cryptocurrency exchange platform project, designing and developing microservices.
